Pacific Exterior offers a unique appearance for exterior environments. The large text area and the single post create an elegant union of form and function. The gently curved panels provide clear wayfinding information and are an ideal complement to our Pacific Interior sign system.

## Designed to Endure

Pacific Exterior is designed to withstand extreme weather conditions, accidental damage and vandalism. Construction is from aluminium and galvanised steel for strength and durability. Panels are stove-enamelled to your colour specifications to create a superb lasting finish.

## Extremely Versatile

Pacific Exterior panels are modular making the system simple to update. There are both wall-mounted and projecting formats, so whatever your design requirements you will always find the right solution.

## Total Security

Pacific Exterior panels are securely fastened to their frame using a concealed locking system. Panels can only be released with a key which protects them from tampering or theft and gives you the assurance that they will retain their outstanding appearance for years to come.

Monolith

To create greater impact, provide "atmosphere" or simply improve visibility in locations where it is essential to be able to view the signs at night, all external signs can be illuminated by durable and secure spotlights.

With ease of maintenance in mind all light units are externally located, so that they can be serviced quickly and easily.

Pacific Exterior has been designed to withstand the most extreme climatic conditions, and full advice with regard to construction and wind loading details is available.
