› modalex®

Interior 10-20 is a modular system with fully interchangeable panels. There are formats for every situation: wall-mounted, suspended, projecting and free-standing, so whatever your wayfinding requirements, you will always find a solution.

Simple to Update

Interior 10-20 is simple to update. You can interchange panels with ease. Individual letter tiles allow you to create new signs or update existing ones. In situations where change is frequent, the Paperflex system lets you print your own signs and display them behind a protective acrylic cover.

Beautifully Finished

To ensure lasting quality, all panels are made from aluminium and stove-enamelled to your colour specifications. Text and graphics are then applied by vinyl or silk-screen printing to create an immaculate finish.

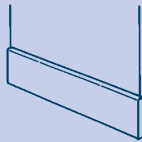

Peace of Mind

With Interior 10-20, there are a range of security options, from fully lockable signs to easily updated Paperflex ones, which means you can choose how to balance your need for security with your need to change and update information.
